## **Introduction**

### *Welcome to V8*

V8 is a comprehensive software package that covers most aspects of optimisation and production for the Woodworking industry. It is Windows software which runs on a PC. It provides all the information to keep control of costs, cut down errors, and cut material efficiently and effectively.

*V8 deals with a variety of products.*

- Kitchen cabinets
- Office furniture
- Shop fittings
- Doors
- Plastic fabrications
- Caravans
- Bathrooms
- Vanity Units

The following pages show a wide range of printouts from Version V8 and cover most of the reports and summaries available from the program.

There are illustrations from several different sorts of data to show the many different ways of working with the software.

### Note

Text above and below each example is not part of the Printout but briefly describes the example and highlights important points.

Some Printouts are adjusted or cropped to fit on the page.

*Example Printouts*

## **Quotes / Orders and Products**

This section shows examples of the reports for the Quotes / Orders, Product library and Product requirements modules.

Many users choose to start the optimisation from a customer order or from a list of Product requirements. The program works out the part sizes and quantities for cutting using the definitions of each product in the Product Library.

There are reports for managing the order (Invoice, Despatch note etc.) and reports for managing the production process such as a breakdown of materials and costs.

The Label and Form Design module is used to create templates for printing reports with different layouts and content. A very wide range of customised reports can be created.

*The software includes a variety of templates and examples of reports to help with the design process.*

**Quotes / orders Invoice** - example of order processing document

# GLOBAL FURNITURE LTD

Furniture House, 27 Wood Lane, Bristol, BS1 2XR, UK  
Telephone: +44 (0)117 933 6323 Fax: +44 (0)117 933 6487

**Order invoice**

Invoice date: 11/04/2006	Order no. BSR QU-35	Our ref.	Your ref.
Customer address <b>Kitchens Direct</b> Ashford Road Birmingham  B11 2RX			

Order / item no.	Details	Quantity	Unit £	Total £
BSR QU-35/001	<b>Code:</b> BASE-SINGLE <b>Description:</b> Single base unit <b>Finish:</b> MFC18-OAK <b>Width:</b> 500.0 <b>Height:</b> 870.0 <b>Depth:</b> 600.0	7	41.08	287.56
BSR QU-35/002	<b>Code:</b> BASE-SINK <b>Description:</b> Sink base unit <b>Finish:</b> MFC18-OAK <b>Width:</b> 1000.0 <b>Height:</b> 870.0 <b>Depth:</b> 600.0	2	43.82	87.64

Fig. 1

*Note* - complete invoice not shown. Invoices may consist of several pages and include continuation sheets, sub totals, final totals etc.

**Product library** - Catalog of products in the product library. Shows thumbnail pictures of each product.

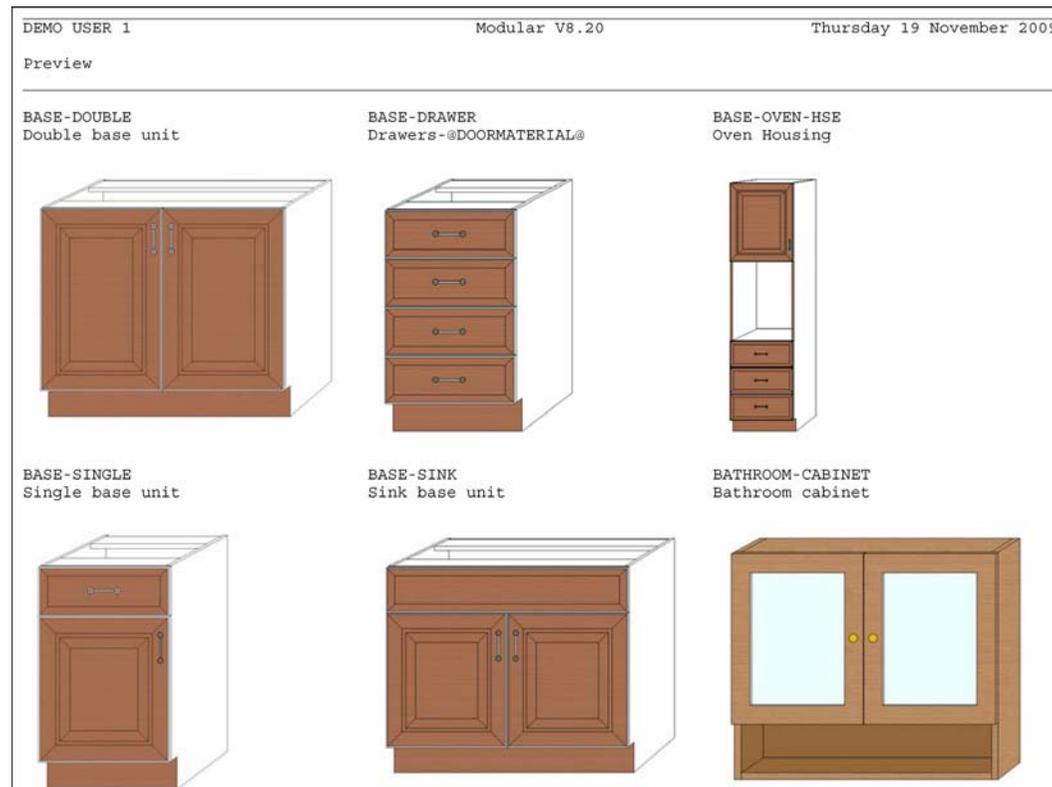

Fig. 2

The product library can include, products, sub-assemblies (e.g. drawer units or pedestals), fittings (hardware) and details of the operations on each products (e.g. assembly, clamping etc).

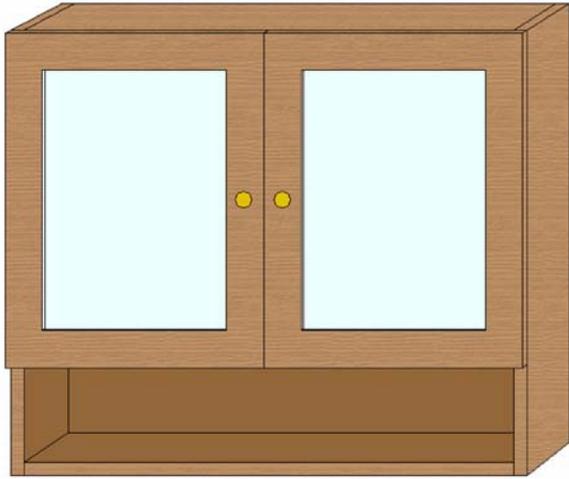

**Product details** - shows drawing and full details of a product definition.

Fig. 5

Note- some items are represented by 'variables' such as DOORMATERIAL and HANDLETYPE. This means that these details (which may vary for each customer) can be entered when the order is taken and do not have to be set up in the product library.

Variables help to keep the product library small, flexible and easy to maintain

**Optimising product requirements** - A list of product requirements is optimised to produce a set of cutting patterns. After each optimisation (run) the program provides a range of analyses and reports.

The first report shown is the Management summary with the overall material use, waste and costs of an optimisation (run).

DEMO USER 1		Modular V8.20		Thursday 19 November 2009

<b>Total parts</b>	<b>156</b>	<b>43.28</b>	<b>0.78</b>	<b>84.60%</b>	<b>6.818</b>	<b>295.08</b>		

Fig. 7

*Note* - the figures at the right include the throughput, number of saw cycles and overall waste. The optimisation uses the optimising and saw parameters to take into account the features of each saw and any limitations on the cutting patterns due to material or handling etc.

*Note* - where there is more than one run in a batch the Batch summary showing one line for each run is shown after optimising.

**Product costing** - breakdown of costs for each product requirement after optimisation

Fig. 12

The database includes fields for custom analysis codes and for different pricing and discount options which are fully integrated with the products and order processing.

**Variables, Formulae, Answers**

The product library can be used to set up a single definition for a group of products. Typically the basic construction is the same but several items such as doors, colour, sizes may vary across the range. To do this the product definition must be flexible enough so these items can vary depending on style and colour chosen. A set of tables are used to set up the Variables, Formula and default answers.

The variables table is where the variables are set up. Typical examples are variables for the door colour, carcass material, type of handle etc.

*Variables table* - stores all the variables used in defining products and parts.

DEMO USER 1		Modular V8.20		Thursday 19 November 2009				
Variables table								
No	Name	Fmt	Dir	Type	Inf	Description	Default	Range
1.	DOORMATERIAL	0	1	1	0	Door Material	MFC18-OAK	
	Range: MFC18-OAK,MFC18-BEECH,MFC18-TEAK,MFC18-EBONY

Fig. 14

Some formula in product definitions are used throughout a range of products. A typical example might be the calculation of the height of a plinth. Use the formula library to store the common definitions. This also helps to reduce errors and make the product definitions easier to read and change.

**Answer table** - stores a set of answers to variables which defines a specific range of products.

DEMO USER 1	Modular V8.20	Thursday 19 November 2009
Answer table		Oak
<b>Width</b>	<b>Height</b>	<b>Depth</b>
<b>Description</b>	<b>Default</b>	
Door Material	MFC18-OAK	
Carcase Material		
Cabinet Material		
Back Material	HARDBOARD-4MM

Rail height		
Drawer height		
Is drawer required?		
Wall unit door type		
Corner door length		

Fig. 15

For a range of products such as 'Country style' kitchen cabinets each product may have a large number of variable items but the answer to many of them, such as finish, or handles may be the same across the range. Use the answer tables allow to store a set of answers for each range.

**User defined tables** - these are used with formula for products to define more complex relations. In the example the table is used to determine which back material is used for cabinets. This depends on the model range and the cabinet size.

## Part library and Part labels

This section shows examples of the Part library and Part labels.

The Part library stores commonly used parts or parts defined with formula (which describe types or styles of part).

DEMO USER 1	Modular V8.20	Wednesday 25 November 2009				
Part library						
Code	Material	Description	Length	Width	Gr	Edge
BASE-CABINET-BOTTOM	@CARCASEMATERIAL@	Base cabinet base	*	*	N	0000
	Length =&INTERNAL_WIDTH&					
	Edge Btm: @EDGING@					
BASE-CABINET-DIVIDER	@CARCASEMATERIAL@	Base cabinet divider	*	*	N	0000
	Length =Z-18-T(@BACKMATERIAL@)-T(@DOORMATERIAL@)					
	Edge Left: @EDGING@

BASE-CABINET-DRAWER-LONG	@DOORMATERIAL@	Base cabinet long drawer	=X	*	*	0000
	Edge Btm: @EDGING@	Edge Top: @EDGING@	Edge Left: @EDGING@	Edge Right: @EDGING@		
BASE-CABINET-END-LEFT	@CARCASEMATERIAL@	Base cabinet end left	*	=Y	N	0000
	Edge Left: @EDGING@					

Fig. 17

The Part library also stores fittings (hardware) and operations such as assembly or packing.

With the label design option a variety of templates can be created for part labels.

Labels can be printed in the office or at the saw.

**Part library** - catalog view of parts in the Part library.

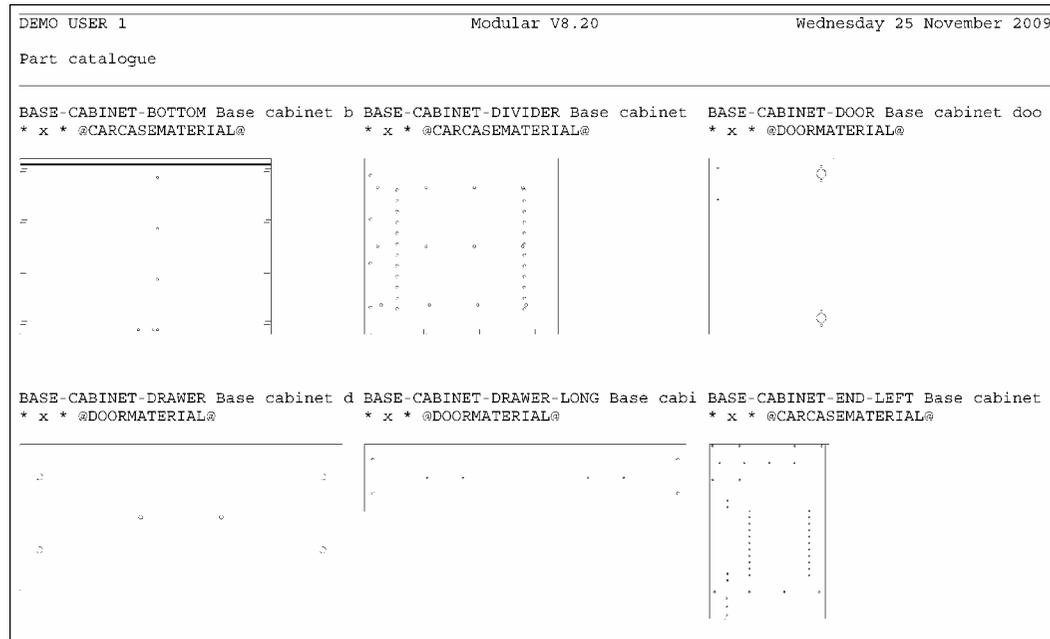

Fig. 18

The part library can contain a large variety of parts.

Some parts including machining and routing instructions. Some plain parts may not need any machining or an associated drawing.

**Part library details** - full information for each part including drawing and machining instructions.

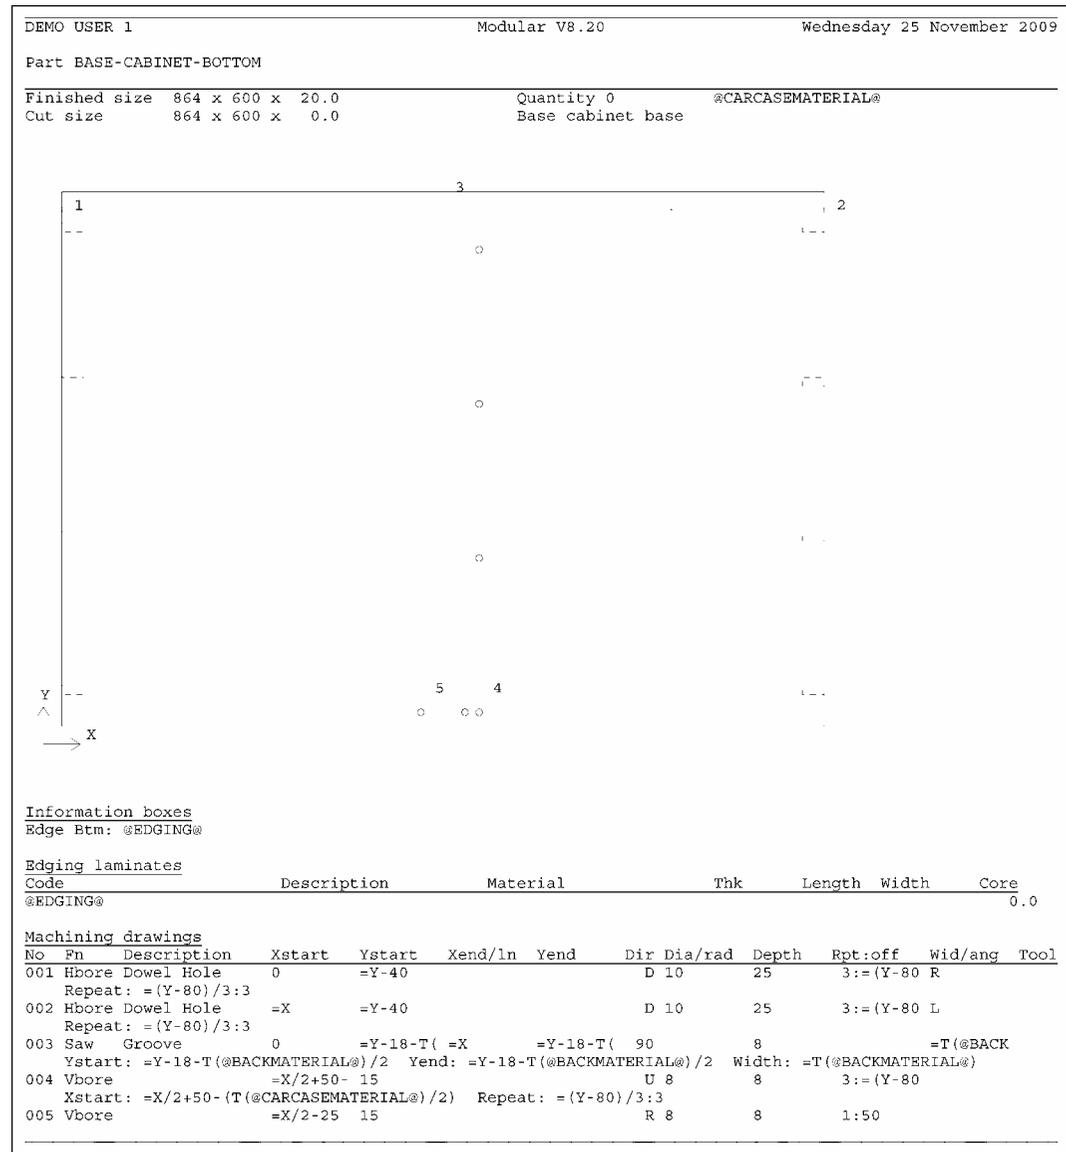

Fig. 19

Example Printouts

**Part costing summary** - shows a summary of the costing for each part in an optimisation of a list of product requirements or a list of parts.

## **Edging and Laminating**

This section shows examples of the printed reports for Edging and Laminating.

Edging and laminating material and operations are set up in the Edging Library.

The program uses this information to calculate the cut sizes for a run ready for optimisation. The edging library also includes costing information.

The part list entered (whether created automatically from the product requirements or entered manually) is usually based on the Finished size and if a part has edging or laminate applied the actual cut size for the core material and the laminate will be different from the finished size to allow for the edging and laminating operations.

**Colours and combination materials** - the program also includes facilities to deal with extensive use of colours and with combination or pre-laminated materials that are produced as required.

Example Printouts

**Edging - details in Part list.** Part list with edging details included.

Fig. 30

Note - the Cutting list includes the laminate sizes as a requirement (Lxxxx).

The core and laminates are then ready for optimising.

**Laminate sheets** - where the laminate requirement (e.g. for front or back laminate) is shown the laminate sheets are included in the optimisation as separate materials. For example, they are shown on the Board summary.

Fig. 32

The function number (Fn) sets the type of edging.

*Note* - Where the material is a sheet (e.g. for laminates) the material details can be stored in the Board library in the usual way and the Material code links to those details.

*Example Printouts*

## Optimising and transfer to saw

Whether working from orders, product requirements or part lists the program always generates a Cutting list (list of sizes for cutting) which is optimised to produce a set of Cutting patterns.

For each job (or run) there is a set of reports describing and analysing the run.

With Form Design it is possible to customise the existing reports and to create new fully customised reports.

**Management Summary** - An overview of the run showing the material used, waste and costs.

DEMO USER 1		Modular V8.20		Thursday 26 November 2009

<b>Total</b>					<b>6.680</b>			<b>11.90</b>

Fig. 38

Offcuts can be stored and used later. The minimum sizes for an offcut are set by the optimising parameters.

**Pattern** - a full page view of each pattern. Below the pattern is a summary of the part sizes on the pattern and the quantities produced.

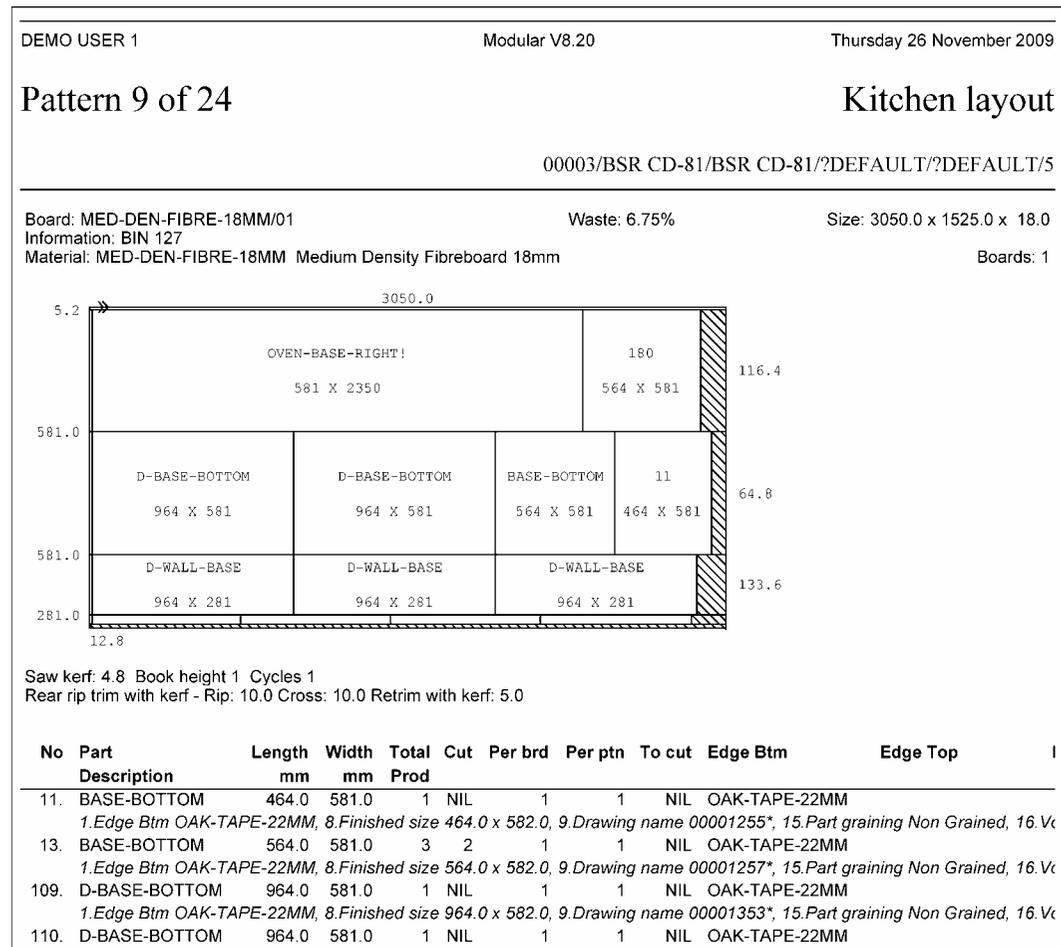

Fig. 39

'Still to cut' assumes patterns are cut in the sequence shown within each material group. The figures at the edge of the pattern indicate the size of the falling piece. The saw kerf and trim settings used are shown beneath the pattern.

**Pattern - with head cut**

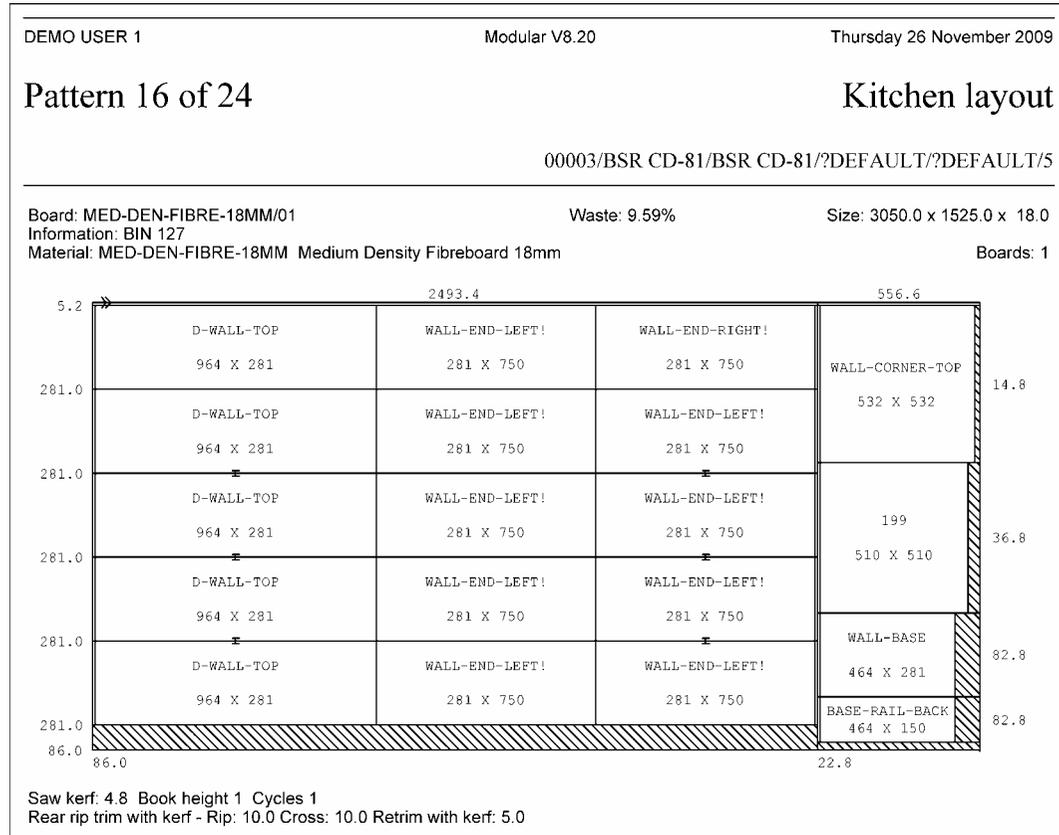

Fig. 40

**Head cut** - divides the pattern into two portions allowing more complex patterns

**Patterns - cutting instructions**

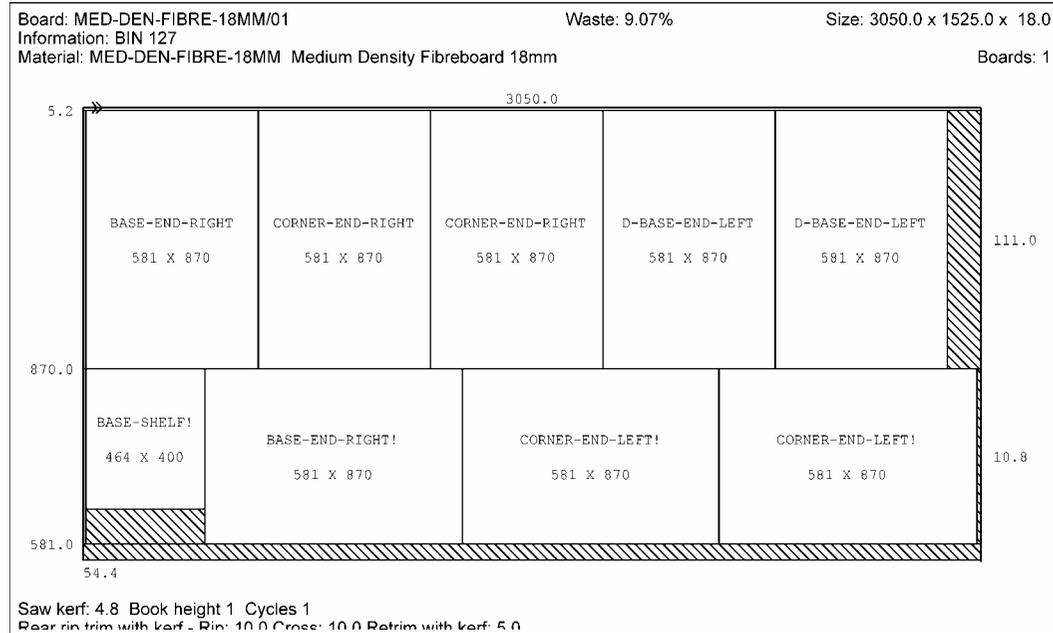

Fig. 42

The patterns following show the same parts cut from sheets of two different materials in the same run.

Example Printouts

Same parts cut from sheets of two different materials in the same run.

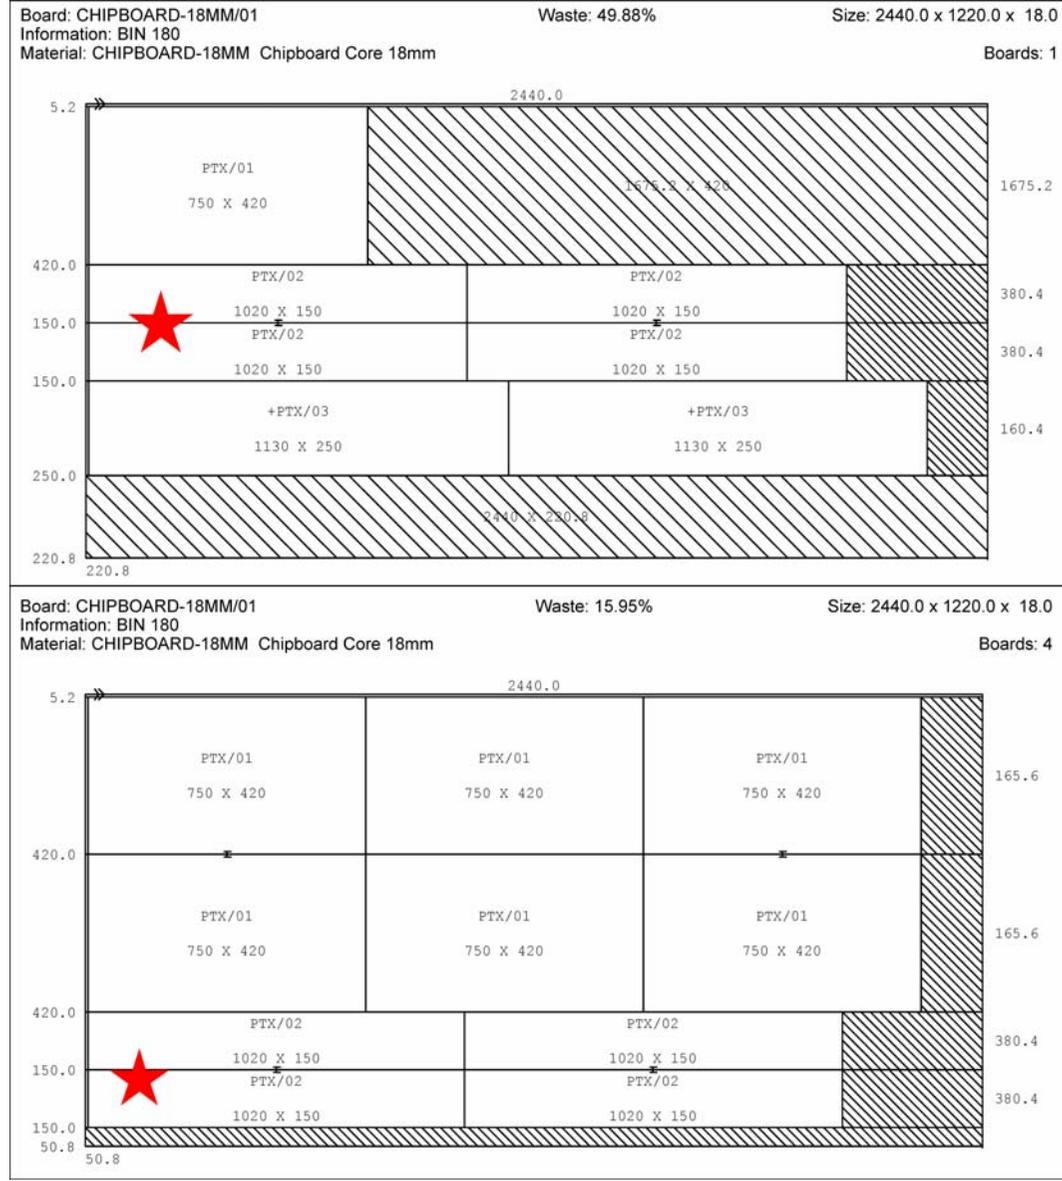

Fig. 65 & 66

**Pattern amendment** - pattern from a run before/after pattern amendment

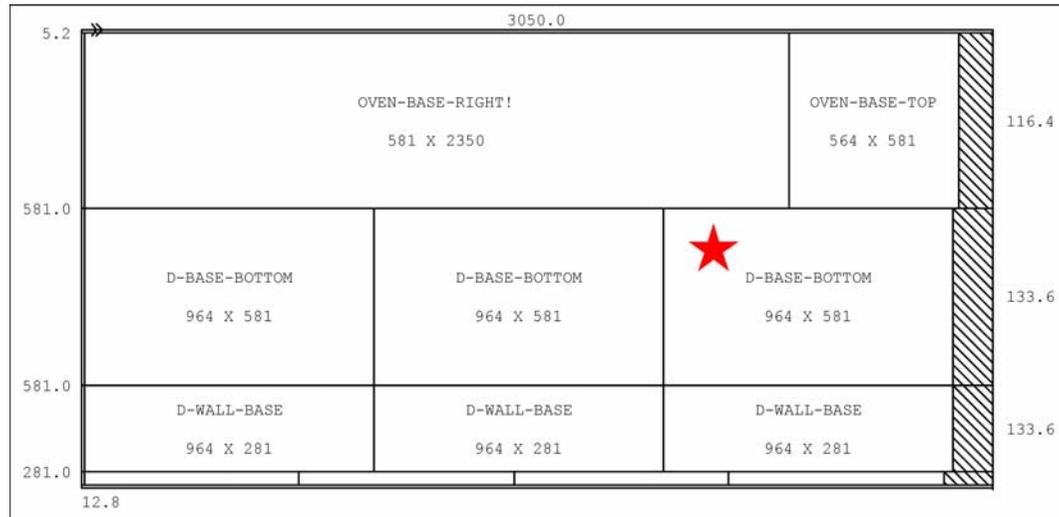

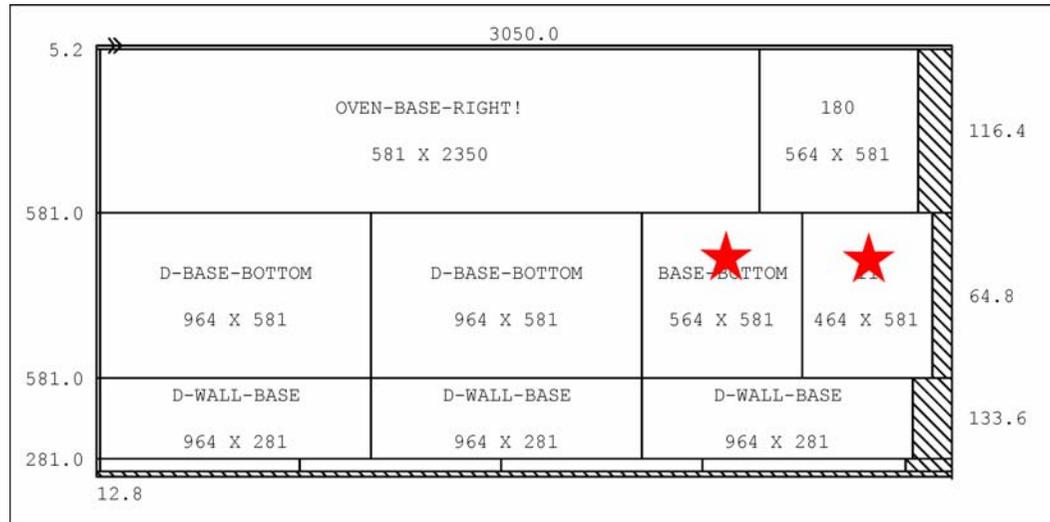

Fig. 67 & 68

In this example parts are deleted and replaced by another part.

**Pattern library - grain matching**

This is the process of ensuring that certain parts are produced from the same area of material so that the grain matches (for example, when producing cabinet doors).

To do this a template is defined for these parts in the Pattern library.

DEMO USER 1	Modular V8.20	Thursday 26 November 2009					
Pattern library		DOORS/3					
Board: 1	Waste: 0.32%	Size: 1504.8 x 450 x 0.0

## Nesting optimising

The program includes Nesting optimising options. These are for runs that are divided and machined at Machining centres.

Part lists and boards are added in the usual way. Where part drawings are used these may be set up in the Machining library or via MPR files.

The part list/cutting list is optimised using the Nesting optimiser options.

### *Nesting part list*

*Example Printouts*

***Nesting parameters***

These are used to set the Nesting features the type of nesting optimiser (Rectangular or shaped), margins, offcuts etc.

```
DEMO USER 1                               Modular V8.20                               Tuesday 1 December 2009
Nesting parameters - NESTING Nesting optimiser
-----
Nesting 1
Optimiser type ----- Shaped nesting II
Minimum part separation ----- 10.0
Board orientation ----- Lengthways
Nesting origin ----- Top left
Board margins
  Top ----- 15.0
  Bottom ----- 15.0
  Left ----- 15.0
  Right ----- 15.0
Override margins for large parts ----- No
Small parts
  Offset small parts from the edge ----- Yes
  Min. area for nesting on the edge ----- 0.000
  Minimum offset from the edge ----- 100.0
Priority
  Box for priority ----- None
Global step angle
  Use global step angle ----- No

Nesting 2
Board template ----- ..\User1\board.mpr
Check MPR program for errors ----- Yes
Spare -----

Nesting 3
Part processing sequence
  Min area for sequence by path ----- 0.000
  Origin for sequencing ----- Bottom left
Parts numbering
  Identify parts ----- Yes
  MPR component ----- Use laser macros
  Number size ----- 50
Board variables globally for all programs ----- No
Delete inactive macros ----- No
Processing templates
  Tool optimisation template -----

Offcuts
Offcut dimensions
  Length -----
  Minimum ----- 800.0
  Maximum ----- 9999.0
  Grid ----- 0.0
```

*Fig. 79*

'Saw' parameters are used to describe the set up for each machining centre.

**Nesting preview**

The result of the Nesting optimisation is a set of patterns.

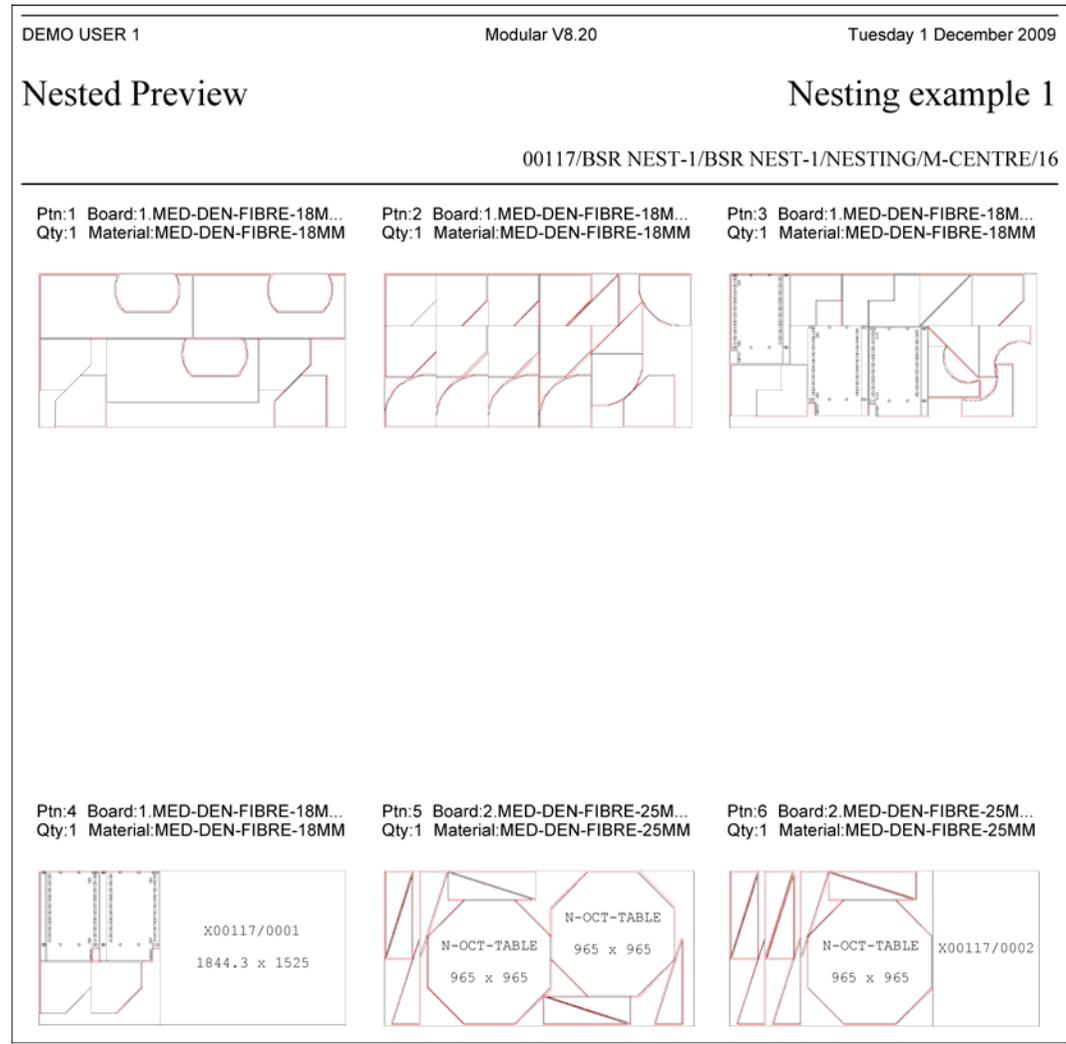

Fig. 80

**Nesting optimising - Pattern for shaped nesting**

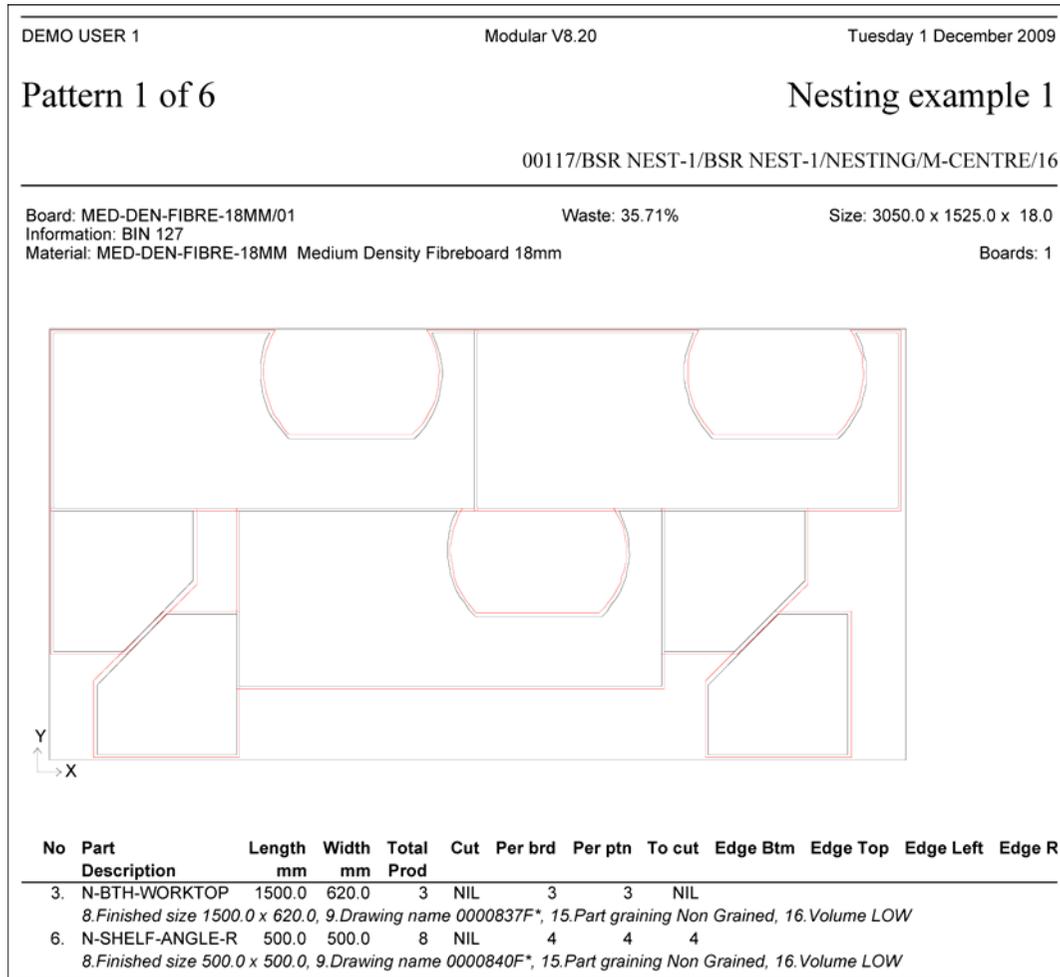

Fig. 81

**Nesting optimising - Pattern for rectangular nesting**

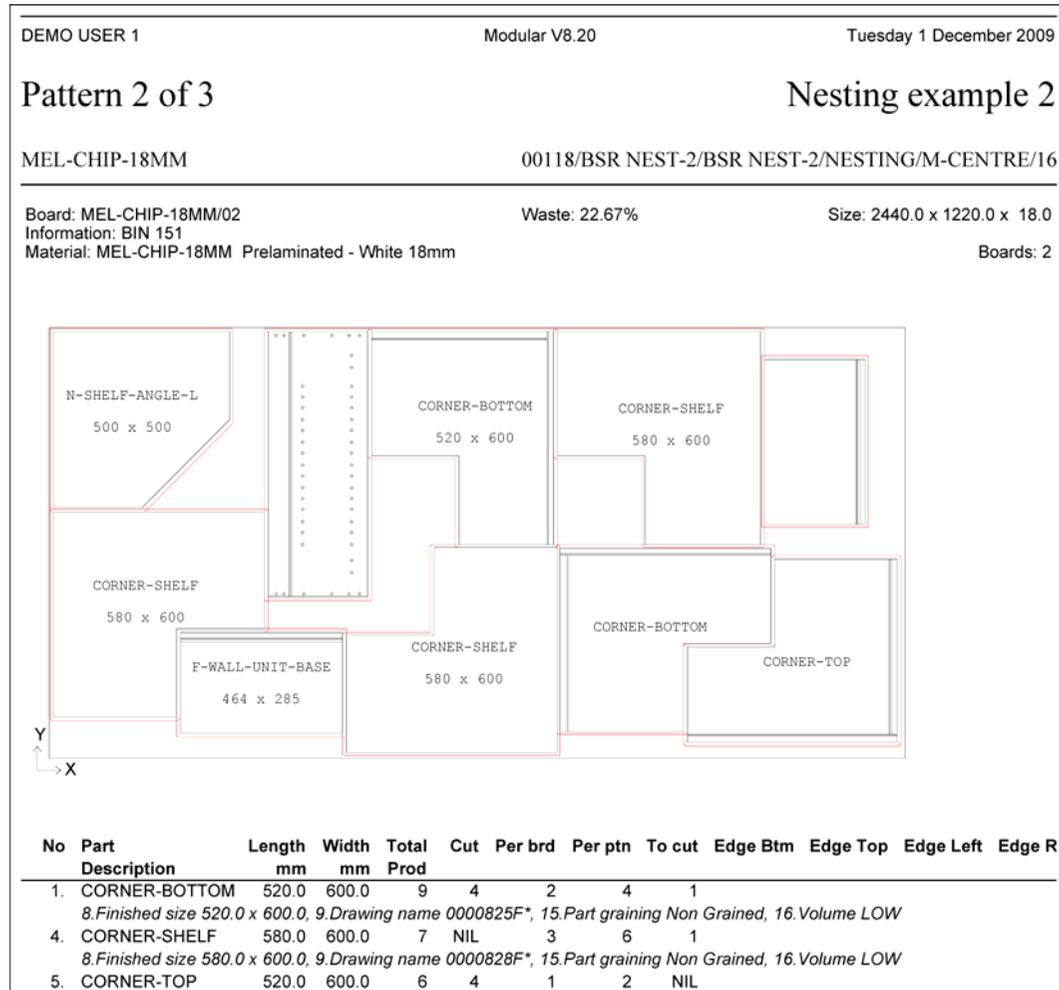

Fig. 82

***Nested optimising - pattern editor***

Nested patterns produced by the Nesting optimisers can be viewed and edited.

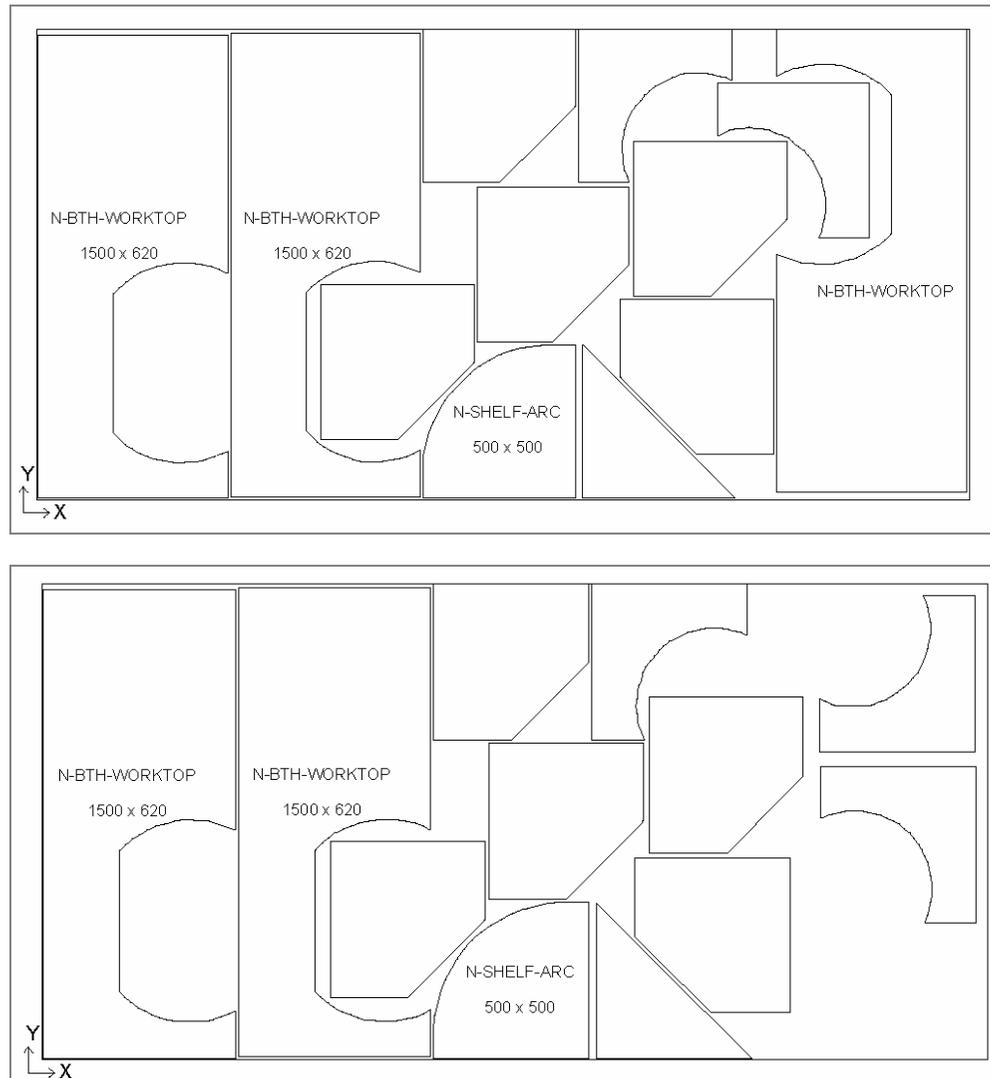

Fig. 83

***Nested optimising - machining library***

Part drawings for Nesting are created in the Machining library.

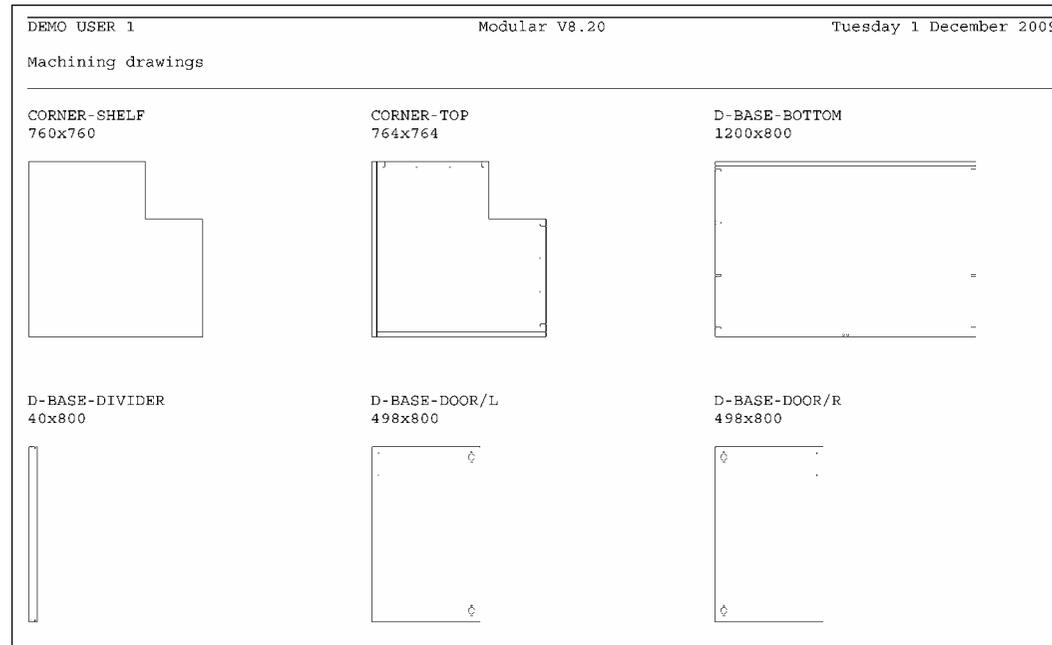

Fig. 84

**Nested optimising - MPR files**

Parts and Part drawings for nesting can also be MPR files

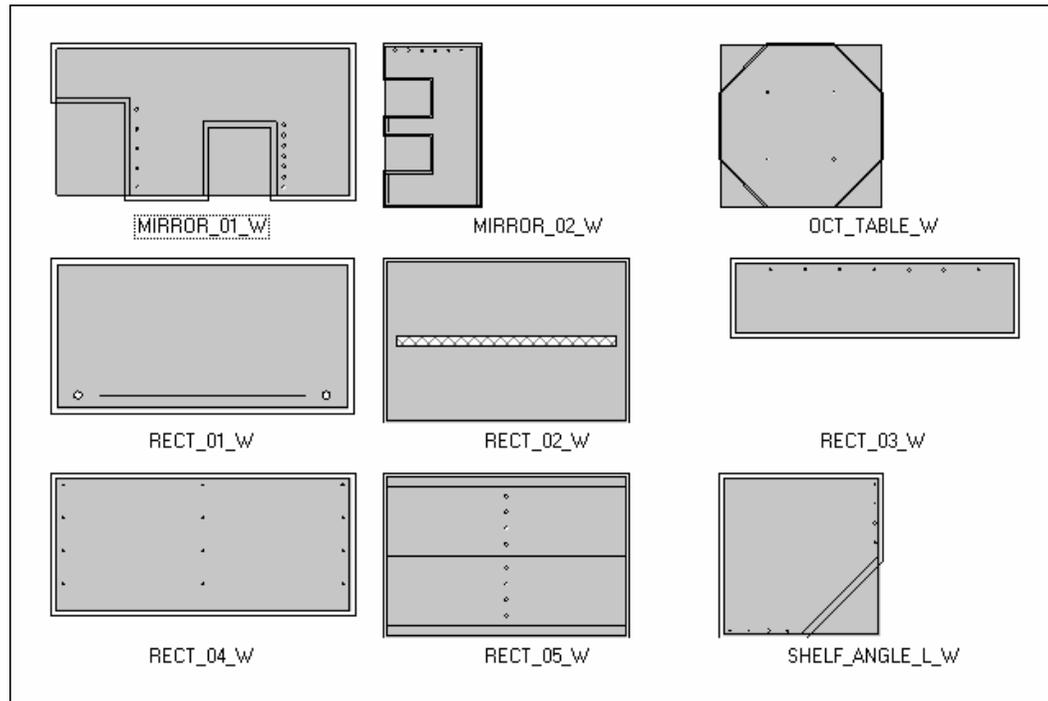

Fig. 85

***Nested optimising - transfer***

Nested runs are transferred to the machining centre via the Machining Interface.

DEMO USER 1		Modular V8.20		Tuesday 1 December 2009		
Transfer to machining centre Weeke						
Batch name: BSR NEST				Description:

*Example Printouts*

## Destacking and Palletising

This section shows examples of the reports available for destacking (offstacking). This can include both manual methods and mechanical offstacking machinery.

**Destacking library** - stores information about the available pallet sizes and the rules for using and cutting baseboards.

DEMO USER 1			Modular V8.20				Tuesday 1 December 2009							
Destacking library														
Ref	Type	Material	Thk	Length	Width	Layout	Per Stk	Max No	Max Ht	Over Ln	Over Wd	Layout	Per LW	Per Stn
BASE1	1	MEL-CHIP-15MM	15.0	2000.0	2000.0	1x1	1	40	1000.00	0	2x2	L	2	
BASE2	1	MED-DEN-FIBRE-25MM	25.0	3500.0	3000.0	1x1	2	100	3000.010	10	4x4	W	2	
PLT/1	0	CHIPBOARD-18MM	18.0	3020.0	3200.0	1x1	1	50	2000.00	0	3x3		2	
PLT/2	0	CHIPBOARD-18MM	18.0	2020.0	2020.0	1x1	0	45	1500.05	0	2x3	L	2	
PLT/3	0	CHIPBOARD-18MM	18.0	1000.0	1000.0	1x1	0	50	1500.00	0	1x1		2	

Fig. 86

For Baseboards the material code is needed so that the baseboard cutting list can be created and baseboards patterns created for cutting the baseboards.

The destacking parameters are used to define which field in the part list holds the destacking library code for the destacking style.

**Destacking pictures** - destacking layout for each part

**Destacking parameters** - These are used to set up station sizes and control the destacking process.

DEMO USER 1		Modular V8.20	Tuesday 1 December 2009
DESTACKING PARAMETERS			
No	Description	Value	
1.	Size of station 1 -----	3000.0,3000.0,A,	
2.	Size of station 2 -----	3000.0,3000.0,A,	
3.	Size of station 3 -----	6500.0,6500.0,A,	
4.	Size of station 4 -----	6500.0,6500.0,A,	
5.	Size of station 5 -----	1000.0,1000.0,M,	
6.	Size of station 6 -----	4000.0,4000.0,M,	
7.	Size of station 7 -----	6500.0,6500.0,S,	
8.	Size of station 8 -----	6500.0,6500.0,,	
9.	Size of station 9 -----	6500.0,6500.0,,	
10.	Size of station 10 -----	6500.0,6500.0,,	
11.	Size of station 11 -----	6500.0,6500.0,,	
12.	Size of station 12 -----	6500.0,6500.0,,	
13.	Size of station 13 -----	6500.0,6500.0,,	
14.	Size of station 14 -----	6500.0,6500.0,,	
15.	Size of station 15 -----	6500.0,6500.0,,	
16.	Size of station 16 -----	6500.0,6500.0,,	
17.	Size of station 17 -----	6500.0,6500.0,,	
18.	Size of station 18 -----	6500.0,6500.0,,	
19.	Size of station 19 -----	6500.0,6500.0,,	
20.	Size of station 20 -----	6500.0,6500.0,,	
21.	Minimum width of strip for auto destack -----	50.0	
22.	Minimum length of part for auto destack -----	100.0	
23.	Box for destack mode -----	0	
24.	Part books to overflow station -----	N	
25.	Manual parts to front -----	N	
26.	Delay use of freed stations -----	Y	
27.	Spare -----		
28.	Destacking options - bottom, top, support -----	#22,,	
29.	Fixed part layout -----	Y	

Fig. 91

The station sizes are used with the Destacking optimisers to work with destacking machinery and stations.

For destacking to pallets / baseboards on the floor the standard optimisers can be used and the station sizes are ignored.

## Materials

The Board library is a record of all the sheet materials and offcuts. When a cutting list is optimised the program uses the board library to identify the board sizes available for each material.

DEMO USER 1		Modular V8.20		Tuesday 1 December 2009			
Board library							
Material	Description	Thickness	Grain	Book	Material parameters	Picture	Type

Fig. 93

*Quantity* - covers physical stock, allocated stock and stock on order.

*Offcuts* - library can include offcuts from previous optimisations.

*Limit* - this is used to set how boards are used e.g. in a fixed ratio, or how to deal with low stock.

**Board list - Optimising**

The program uses the Board library to create a Board list containing the candidate board sizes for each optimisation.

For example, if a part list contains a part with the material code MED-DEN-FIBRE-18MM then those boards sizes are candidates boards for the optimisation and are included in the board list.

The file is in the standard format for the program for boards. BDX

## Stock control

This section shows some examples of the many stock reports that are available. The program offers a comprehensive system of physical stock control for sheet materials, fittings (hardware) and edging materials.

## Machining centre interface

The Machining library holds full details of machining for each part including vertical and horizontal drilling, routing, cut-outs, contours, pockets etc. It includes tooling information for the machining centre. Any machining for parts in an optimised run can be automatically downloaded to a Machining centre.

Where necessary print full details of each machining drawing and the machining instructions.

***Transfer to Machining centre*** - Parts lists with machined parts to transfer to machining centre

Fig. 111

## Drawing and Cad Drawing libraries

These libraries store drawings of Products, Room layouts, fittings (hardware) etc.

**Drawing library** - thumbnail view of items in library showing various products and fittings.

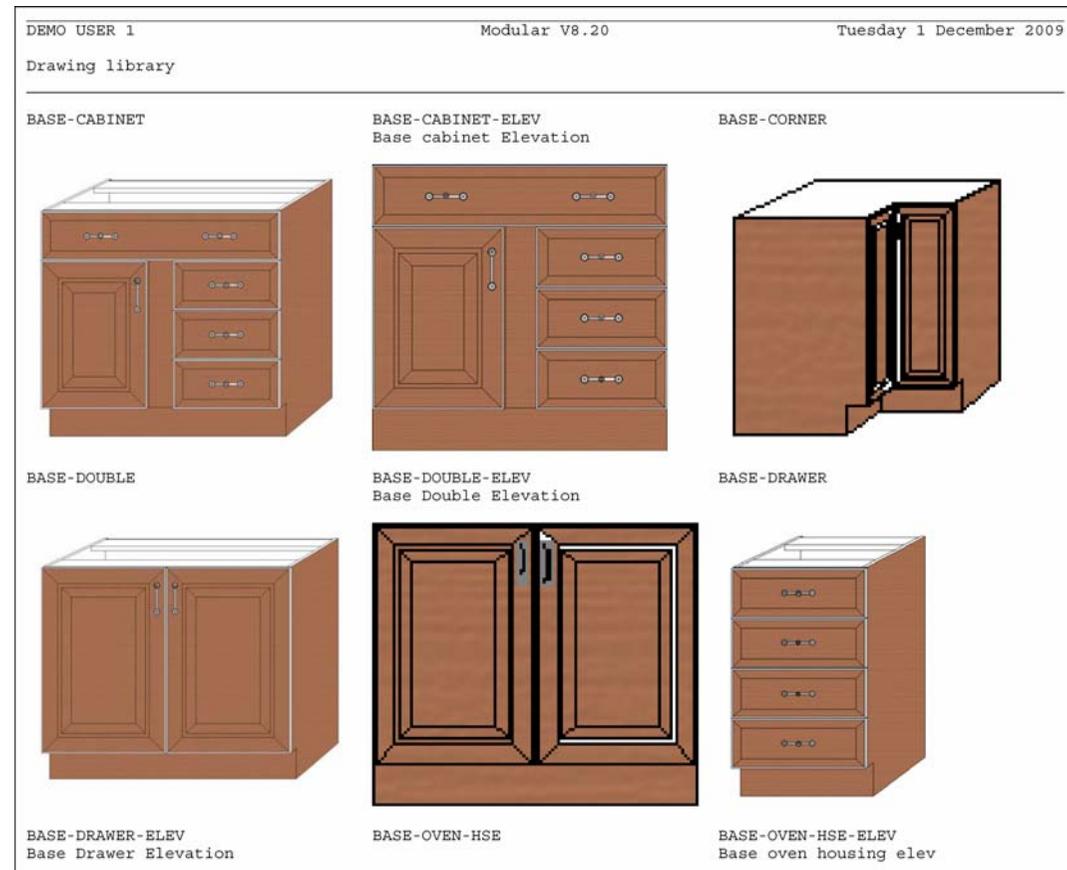

Fig. 112

**Cad drawing** - kitchen layout including products from the Product library

Use the Cad drawing library to specify a room layout and the products it contains - these can be automatically optimised for an estimate or production.

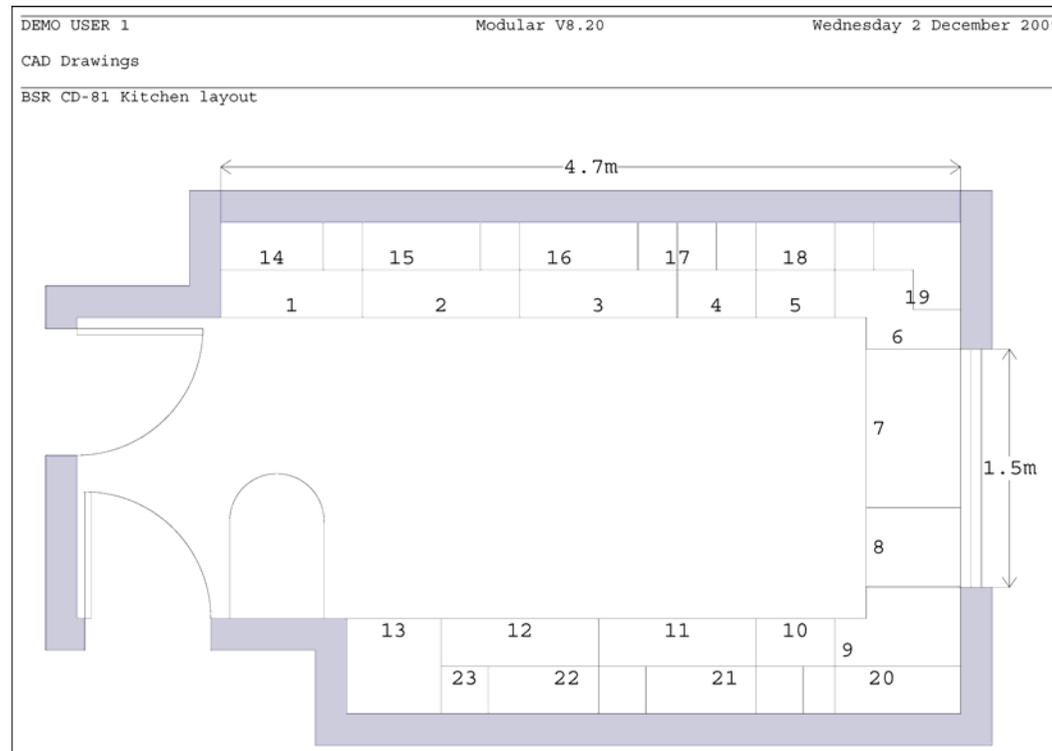

Fig. 117

*Note* - any Cad drawing can be added to a Print layout so that the project and admin data is included. Print layouts are designed in the Drawing library

Drawings can be exported as bitmaps and metafiles. DXF drawings can be imported

*Example Printouts*

## **System and Tools**

There are several facilities to help set up and manage the software.

*System parameters* - set the basic features, layout and style of the program

*Information boxes* - create custom data for part lists; select from a wide range of pre-defined information for each part

*File management and back-up* - administer all part lists, libraries and take snapshots of each user directory

*Check* - run a check of the program set up and computer

*Errors and Help* - Each error has a link to Help page describing each error and giving possible fixes. A very comprehensive help system provides context sensitive help, background topics and How To topics,

### System parameters

Basic set up for the program; language, measurement mode, paths etc.

```
DEMO USER 1                               Modular V8.21                               Thursday 11 February 2010

System parameters

-----

General
Language ----- English (UK)
Measurement mode ----- Metric (0.0 - 9999.9 mm)
Order of dimensions on screens and printouts
  Parts and boards ----- Length Width
  Products ----- Width Height Depth
Modules -----
  PO - Professional optimiser
  NE - Nesting optimiser

**File Management** - list of Optimisations (Runs)

Use the File Management and Backup tools to administer all the part lists, libraries and other data from within the program. The program keeps track of temporary and other files created during optimisation and data transfer and provides an easy way of archiving and deleting run data.

## Help

A wide variety of help topics are available. Help can be viewed on-screen or printed.

### Overview and How To topics

Page 1 of 3

Board library - Overview

**Board library - Overview**

**Materials, board sizes, and board quantities in stock**

The Board library stores information about Boards in the following structured way

```

MATERIALS
  BOARDS (Board sizes)
    TRANSACTIONS (Stock module only)

```

Boards are divided into different types of material, for example, CHIPBOARD-15MM or FIBREBOARD-18MM and so on. Within each material type several different sizes may be available, for example:-

```

CHIPBOARD-15MM
Code      Length  Width  Quantity
BOARD1    3660.0 x 1220.0    322
BOARD2    2440.0 x 1220.0    240

```

*The program relies on the Board library to select the correct board sizes for each part when optimising so the library (or some of it) needs to be set up before Optimising.*

The demonstration data contains an example Board library

At the main screen:-

- Select: **Libraries - Board library**

or

 Select the ToolBar option

The screen shows the list of materials in the library.

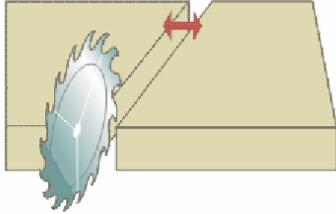

Fig. 126

**Help - in-context topics**

Saw kerf Page 1 of 1

**Saw kerf**

Optimising parameter to set width of saw kerf

This is the material lost due to the saw blade when cutting. Use the value recommended by the saw manufacturer. Typical values for woodworking are: 4.8mm, 3/16in etc.

For tight cutting or for materials such as glass or metal the saw kerf is not significant and can be set to zero if necessary.

On diagrams the saw kerf is usually shown as a single line (and is not to scale). To show the saw kerf to scale use the System parameter: *Patterns - labelling style, show saw kerf to scale* (for example where using a very large saw kerf).

[See also](#)

Fig. 127

*Note* - most topics include a See also button showing items related to the current topic

**Help - advice on specific errors**

Part position not correct	Page 1 of 1
---------------------------	-------------

**Part position not correct**

May occur when editing nested patterns

When editing parts in a nested pattern the part can be positioned anywhere on the board, however, whilst the part position looks Ok in the editor it may not be correct when the board is machined. For example:-

- part border may go over the edge of the board
- part border may go over the edge of another part border
- part border may be too close to another part border

Some of these problems can be caused by the safety border area which is not shown in the editor

An error is shown for each part that is not in a correct position

Part position not correct Border 3 Part F-UNIT-END-LEFT

The 'Border 3' value indicates this is third item added to the pattern.  
The Part value is the name of the part.

There may be multiple occurrences of the same part on a pattern but the border value is unique.

During editing the current border value is shown to the left of the nested pattern drawing next to the function heading.

The pattern can be edited by pressing the edit button. This closes the dialog and the first invalid border is automatically selected. If the Continue button is pressed the changes are saved and the pattern can be corrected later.

33120

Fig. 128

*Note* - the error number is shown in the box at the foot of the help page.

*Example Printouts*

## Inches data

The program can work in millimetres, decimal inches or fractional inches and this applies across all modules.

Decimal inches are inches expressed as a decimal e.g. 2.25in, 1.125in. Fractional inches are inches expressed as a fraction. e.g. 2-1/4in, 1-1/8in.

The program operates in the same way for each measurement mode but there are some minor format changes to screens and reports to allow for the different number formats.

Some examples of saw optimising reports in fractional inch mode are shown in this section.
