

## Stock Control – Datasheet SC

*For accurate and efficient inventory management*

A complete stock system for sheet materials but it can also be integrated with external systems such as the Bargstedt SQL server stock management system.

Offcuts generated in one optimisation can be sent back to the board library for use in later runs with customised cost adjustment.

The exact amount of stock can be reserved for future jobs.

The simplest operation is to control the physical stock in the Board library.

- Optimise run (or batch of runs)
- Issue stock for runs

The sheets required for cutting are removed from the library and any offcuts generated by the run are entered as new items in the library.

## Control physical stock

The board inventory is shown in the Board library.

The material code is a unique identifier for each material. The board code is a unique code for each material and size. The Board library includes offcuts generated from earlier jobs (labelled with X ...)

The material code against each part in the part list is used to match up part requirements and materials available.

The run can be checked and viewed via 'Review runs'.

Once the run is committed for cutting (data sent to saw) the stock can be updated by the 'Issue stock for runs' options.

The Board library is updated.

The quantities are adjusted in the board library and any new offcuts added to library.

## Stock allocation and receipts

The SC module includes a full set of options for the allocation and receipt of stock.

The screenshot shows the 'Board library' window. The top menu bar includes 'File', 'Edit', 'View', and 'Help'. Below the menu is a toolbar with various icons for file operations. The main area is divided into two sections. The upper section is a table of materials, and the lower section is a detailed view for a selected material.

Allocation can be used after optimising to reserve the stock for the job. Receipts are used to record incoming stock and adjust stock levels.

The Board library includes fields for Stock on order and Allocated stock and the optimiser takes account of the allocated stock (reserved stock) when optimising so that reserved stock is not used. A stock allocation screen deals with stock reservation.

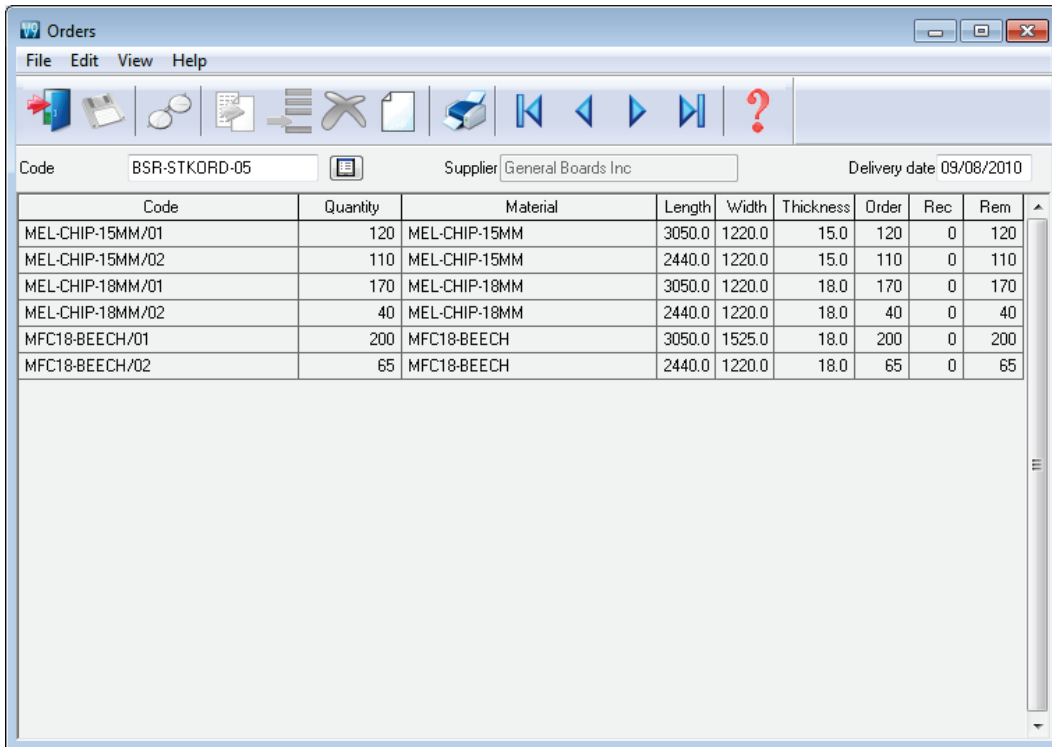

The screenshot shows a software window titled "Allocations" with a menu bar (File, Edit, View, Help) and a toolbar containing various icons. Below the toolbar, there are input fields for "Run" (EXAMPLE 10), "Reference" (Example 10), and "Cut date" (23/05/2012). The main area contains a table with the following data:

Code	Quantity	Material	Length	Width	Thickness
MFC18-BEECH/01	20	MFC18-BEECH	3050.0	1525.0	18.0
MFC18-BEECH/02	267	MFC18-BEECH	2440.0	1220.0	18.0

Stock deliveries and use can be co-ordinated with the Board library.

Stock is ordered via the Order screen:-

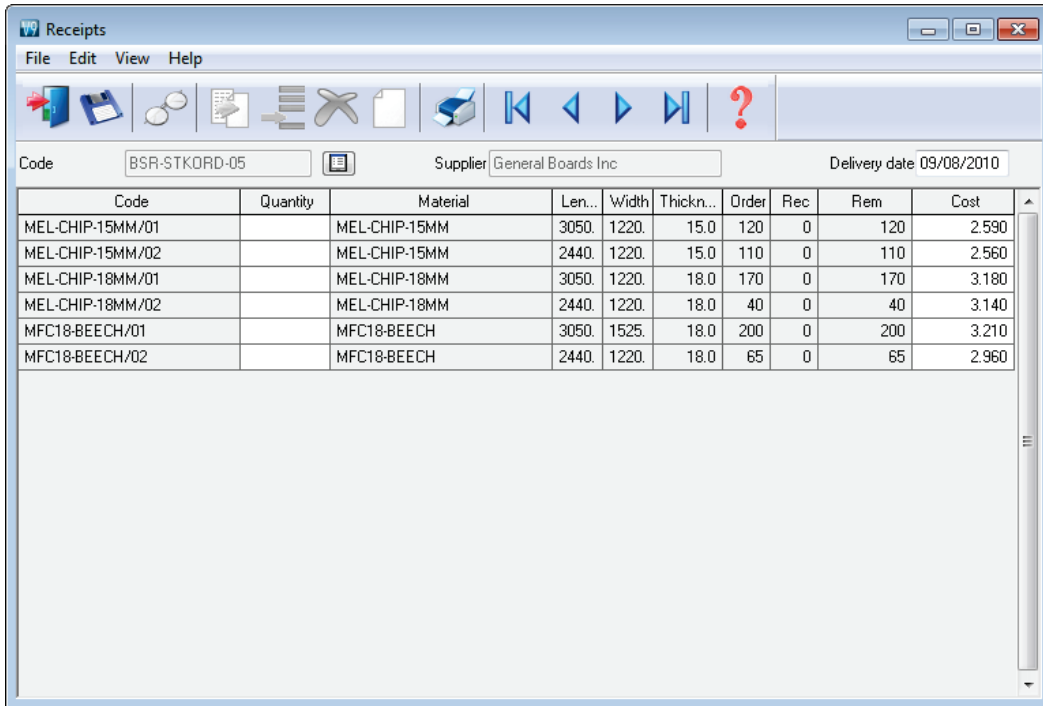

The screenshot shows a software window titled 'Orders' with a menu bar (File, Edit, View, Help) and a toolbar containing various icons for file operations and navigation. Below the toolbar, there are input fields for 'Code' (BSR-STKORD-05), 'Supplier' (General Boards Inc), and 'Delivery date' (09/08/2010). The main area contains a table with the following data:

The Orders are stored in a library so a record of each order is maintained.

Stock receipts are recorded in the Receipts screen.

The screenshot shows a software window titled "Receipts" with a menu bar (File, Edit, View, Help) and a toolbar with various icons. Below the toolbar, there are input fields for "Code" (BSR-STKORD-05), "Supplier" (General Boards Inc), and "Delivery date" (09/08/2010). The main area contains a table with the following data:

**Pre-laminated material** - where boards are laminated prior to cutting the stock update automatically keeps track of both core material and laminate material used.

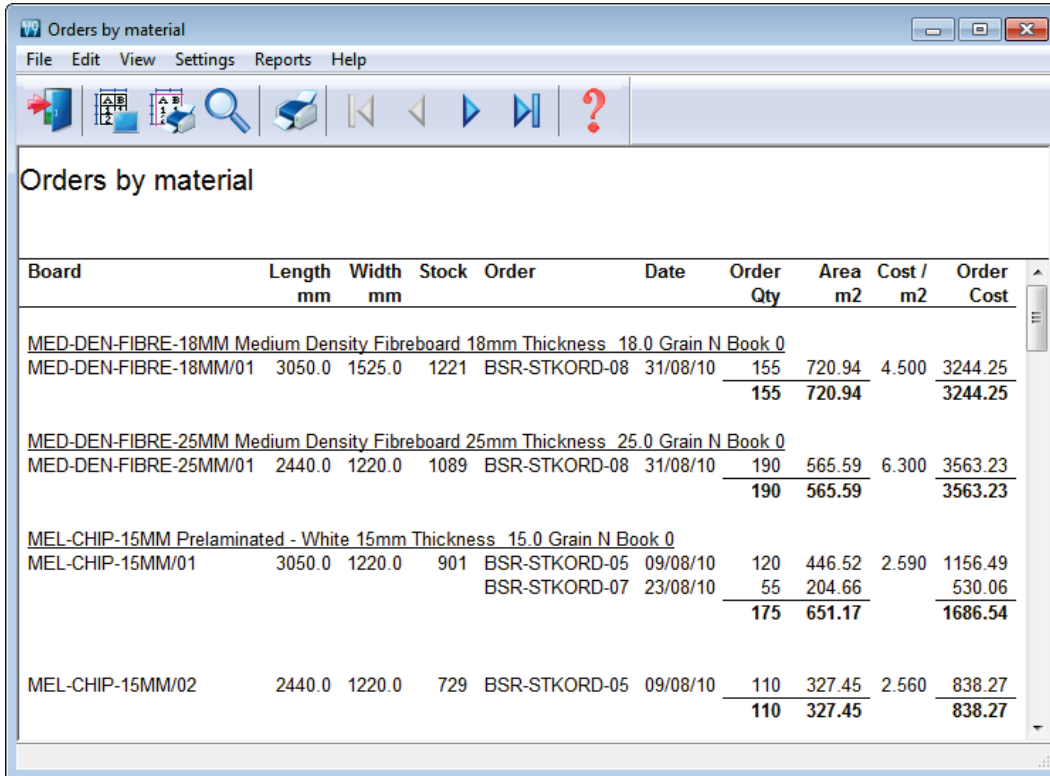

Laminates and core material are stored in the Board library.

## Stock reports

A range of reports are available for monitoring the stock process.: Orders by material, Orders by supplier, Allocations by material Stock valuation, Minimum free stock, Monthly material summary, Stock issues summary, Audit trail report, Stock history, End of month/year

The minimum and re-order quantity can be set for each sheet size in the Board library.

## Stock issues

The issues report show the stock used for cutting.

The screenshot shows a software window titled "Stock issues" with a menu bar (File, Edit, View, Settings, Reports, Help) and a toolbar with various icons. The main content area displays a table of stock issues for the range 29-Jul-10 to 23-May-12. The table has columns for Board, Length (mm), Width (mm), Issue, Area (m2), Volume (m3), Cost / m2, and Total Cost. The data is grouped by board type, with sub-headers for each group.

### Integration with external stock systems

These days it is quite common for stock and orders etc. to be held in external systems including mechanical stock handling systems. The SC module can be integrated with external systems.

- Full integration with the Bargstedt SQL server materials system
- Import/Export options for materials and boards
- Option to run external linking programs automatically

This later allows the Board library to be kept in sync with external databases.

The board library has a full set of editing options to allow manual adjustments and changes.

### **Stock control of parts**

With the PL module the stock control options include the control of parts so that over produced parts can be stored and taken into account in future lists by reducing the requirement for that part.

### **Stock control of Fittings and Edging material**

With the PL, PQ and EL modules the stock control options include the control of fittings (hardware) items in the Part library and Edging material in the Edging library (solid edging and laminate sheets).

### **Stock Control summary**

*Stock control typically requires one of the Optimising modules; LO, SO, PO, NE*
